                                                                                                                                                                                                                                                                                                                                                               detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9860 from Bacillus sp strain XSM-KP9860 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by olecacid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it settive over the pH range 4-13 and has at least 80% of its optimum estivity over the pH range 4-13 and has at least 80% of its optimum stable over the pH range 6-11; (b) afters 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the blackness. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 NDVARGIVKADVAQSSYGLYGQGOVVAVADTGLDTGRNDSSMHEAFRGKITALYALGRTN

The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 23$). This sequence represents a fragment of the alkaline protease A-2 from Bacillus sp NCIB12513 described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                    This is the amino acid sequence of a novel procease of Bacillus sp. JP170 (NCIB 12513), as deduced from the nucleotide sequence of an isolated gene (see BAN82392). The entire protein, including the signal peptide and prepro region, has 77% identity to alkaline procease Y (see AAM89548) from Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour development through hydrolysis of proteins degradation of undesired peptides and in enzymatic synthesis of peptides. It has enhanced stability towards oxidation under alkaline conditions, to towards bleaching agents of the protease activity is diminished. Such provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to alkaline proceases produced by strains of Bacillus. The proceases ability to digest casein is not inhibited by oleic acid and they have a high stability to exidising agents. The alkaline procease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the range pH 6-12; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoclectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to exidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 NDVARGIVKADVAQSSYGLYGQGQVVAVADTGLDTGRNDSSMHEAFRGKITAIYALGRTN

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38) compared to prior art alkaline proteases (31 and 32%). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sp SD-521 (FERM BP-11162) alkaline protease protein fragment.

The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represents an alkaline protease of the invention. The novel proteases have an increased detergency

This is the amino acid sequence of a Bacillus sp. alkaline protease Y that is said to have good alkali and surfactant resistance and improved detergency. It shows 77% identity to a newly isolated protease (see AAW89547) of Bacillus sp. UPI70 (NCIB 12213). The invention provides production of such proteases. The protease are used in laundry and chostwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for debittering and enhancing the degree of hydrolysis of protein hydrolysates, for flavour development through hydrolysis of proteins, degradation of undesired peptides and in enzymatic synthesis of peptides. They have enhanced stability towards oxidation under alkaline conditions, e.g. towards bleaching agents of the protease activity is diminished. Such cells can be used for the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        i,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         442

                                                                                                                                                                                       The sequence is that of alkali-protease Ya enzyme which can be used in the recombinant production of Ya enzyme. Ya enzyme is excellent in alkali resistance and surface active agent resistance and improves detergency
                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            299

```
The present sequence represents the Bacillus lion Y protease. The invention claims for enzymes covalently modified on their surface by the ettachment of a large number of small polymentic molecules, e.g. the trachment of a large number of small polymentic molecules, e.g. the protein glycols (PEG). The polymentic molecules are coupled to the Netwinal amino group and the amino groups of lysine residues found on the surface of the enzyme. In the example given, the lion Y protease was modified using methoxypolethyleneglycol (mPEG) as the polyment molecule. The Netwinal amino group and the amino groups of the fourteen lysine residues present on the surface of the lion Y protease were modified. Modification of the enzymes increases the stability and/or reduces the sensitising potential (allergenicity) of the enzyme, without capacitising potential polymeric molecules, rather than a few very large ones, provides a more even effect with reduced activity loss. The modified on provides a more even effect with reduced activity loss. The modified cand hair care products, e.g. soaps, cosmettics, creams, gels, libsticks, hair gels, sun oils, shampoos, hair dyes, insect repellants, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New enzyme modified by attachment of many polymeric molecules - useful in skin and hair care products, has reduced tendency to cause sensitisation and increased stability.
                                                                                                                    /note= "The enzyme is modified by methoxypolethyleneglycol molecules covalently attached to the N-terminal amino group and to fourteen unspecified amino groups of lysine residues present on the surface of the enzyme"
  lipstick; hair gel; sun oil; shampoo; hair dye; insect repellant.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                             434

Patent No. 655535

GENERAL INPORMATION:
APPLICANT: Bauditz, Peter
APPLICANT: Bauditz, Peter
APPLICANT: Mikkelsen, Frank
APPLICANT: Andersen, Kim
ITILE OF INVENTION: Protease Variants and Compositions
FILE REPREBRUCE: 5349.204-US
CURRENT APPLICATION NUMBER: US/09/512,251A

CURRENT APPLICATION NUMBER: US/09/512,251A

CURRENT FILING DATE: 2000-02-24

NUMBER OF SEQ ID NOS: 12

SOFTWARE: PatentIn version 3.1
